Wyatt Rewoldt
27813 Joan St
Saint Clair Shores, MI 48081

To Whom it may concern,

Wyatt Rewoldt was initially seen on 3/16/16 for a traumatic brain injury secondary to shaken baby syndrome at the age of one year old. Patine was hospitalized and placed on life support for one week and then place in rehab for 6 weeks. Wyatt also has other complications due to the brain injury, he has a gaid disturbance, speech and language disorder, cognitive and neurobehavior dysfuction, seizures, hemiparesis affecting left side as a late effect of a CVA. Due to all of these deficits, Wyatt will be totally dependant on his Mother for all of his needs. He will not be able to be gainfully employed, make excutive decisions, manage expenses, This is the result of the shaken baby syndrome, which caused all of these deficits. It is a very unfortuante situation that should not have happened had he not been exposed to an enviroment that would be detrimental to his health, this incident happened while he was in the care of his biological father and his father's girlfriend.

If there are any questions, please let me know.

Sincerely, Edward Dabrowski, M.D., PM&R
